MANAGED ICS/OT NETWORK VISIBILITY & THREAT DETECTION

With Dragos Neighborhood Watch, our team of ICS cybersecurity experts is part of your team, performing comprehensive asset identification, threat detection, and incident triage with the cloud-deployed Dragos Platform to ensure threats don’t get overlooked. Similar to IT-focused MTH services, our elite team of analysts proactively hunt threat activity in your ICS environment based on the latest threat intelligence and operational data from Dragos and work alongside your team to triage and investigate to an incident before it becomes a significant breach.

THE DRAGOS DIFFERENCE

Dragos is comprised of the industry’s most experienced team of ICS security practitioners, who have been on the front lines of every significant industrial cybersecurity attack globally, including the 2015 and 2016 Ukraine attacks, CRASHOVERRIDE, and TRISIS.

Neighborhood Watch offers the expertise of an elite group of ICS intrusion detection analysts and investigators, all dedicated to proactively hunting for adversary activity in your environment and on your behalf.

KEY BENEFITS

Understand ICS Assets and Their Behaviors

• Establish visibility of assets on your OT network with a comprehensive architecture assessment
• Immediately improve your security posture by understanding what contractors and vendors are doing in your environment
• Regular reports of ICS assets and communications and any changes that occur

Reduce Mean Time to Threat Discovery

• Regular reports on threat hunt findings and response recommendations from Dragos Industrial Hunters
• Routine threat hunts based on newest adversary tactics, techniques, and procedures (TTPs)
• Built on the comprehensive capabilities of the Dragos Platform

Decrease Response and Recovery Time

• 24x7 notification of incidents with added context and recommendations
• Reduced alert fatigue
• Immediate support for critical situations
Managed Visibility + Detection + Response

Ease of deployment & maintenance using the cloud-based Dragos Platform

Dedicated Team of Dragos Industrial Hunters to remotely monitor your OT environment

Visualization of asset characteristics and behaviors

Visibility of changes over time with baselines and timeline analysis

Routine, proactive intelligence-led threat hunts based on latest IOCs and adversary TTPs

24 x 7 monitoring and threat validation with multi-channel notifications to ensure awareness

ICS threat landscape visibility via threat intelligence and analytics

Cloud-scale telemetry enables integration of Dragos operational data and community use cases

Recurring environmental checkups and Dragos Platform tuning

Note: Data gathering processes and procedures are GDPR compliant. Contact us to learn more.
